THE STÛV P-20S

stûv

THE ESSENTIAL FIRE

With its simple, slender design, the Stûv P-20s pellet stove integrates naturally into the heart of your living space.

Relax in front of the dancing fire, a large, serene flame. Enjoy the natural heat, with total control and in silence...

Sleek design, pleasure of fire

- Stove with sleek, architectural lines
- Large curved glass window opening onto a large combustion chamber
- Low base plate, "living room" fire height
- Large, calm, controlled flame
- Powerful radiant, "wood" heat

The continuous line, from the combustion chamber to the frame of the stove, maximises the view of the fire from different corners of the living room.

The Stûv P-20s combines the advantages of pellets with a heat and flame quality comparable to those of a wood fire, thanks to its patented "flower burner".

Enjoy the silence

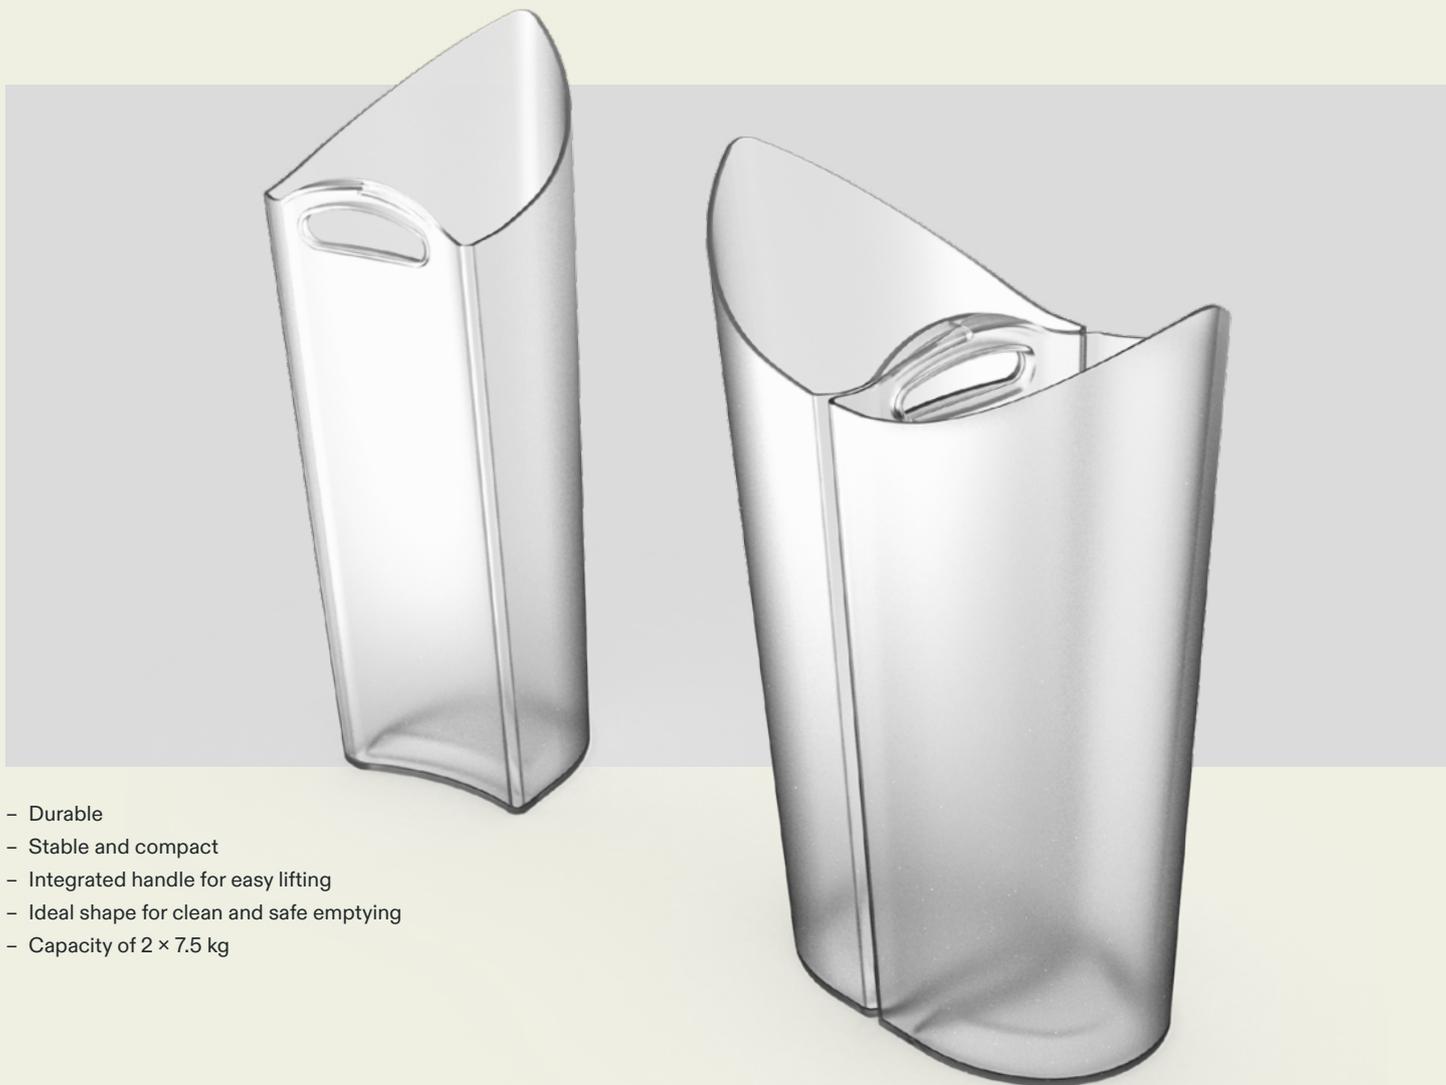

- Natural convection, no fan noise
- Upward feed to the burner, no dropped pellets

Practical

PELLET TWIN SET

The streamlined shape and timeless style of the Pellet Twin Set harmoniously complement the Stûv P-20s stove while providing you with a transport and storage solution.

- Durable
- Stable and compact
- Integrated handle for easy lifting
- Ideal shape for clean and safe emptying
- Capacity of 2 × 7.5 kg

For convenience, the front loading door lets you load the pellets at chest height.

The ash removal system switches on automatically after 6 hours of continuous operation. With its large capacity, the ash pan only needs emptying every 170 hours of operation (nominal power).

Connected stove

- Operated by smartphone (free app), via the standard display or, as an option, by remote control.
- Operating autonomy from 10h (nominal power) to 21 h (slow-burn rate).

Remote monitoring

Sensors ensure that the stove operates safely.

By networking the device, you can not only use the control application, but also benefit from remote monitoring.

A 24/7 analysis of operation allows breakdowns to be anticipated and appropriate assistance to be provided in case of an alarm.

Updates to the application ensure that you benefit from the latest improvements.

Maintenance

A maintenance booklet, essential for proper management of your device over time, is provided to you when you purchase the stove.

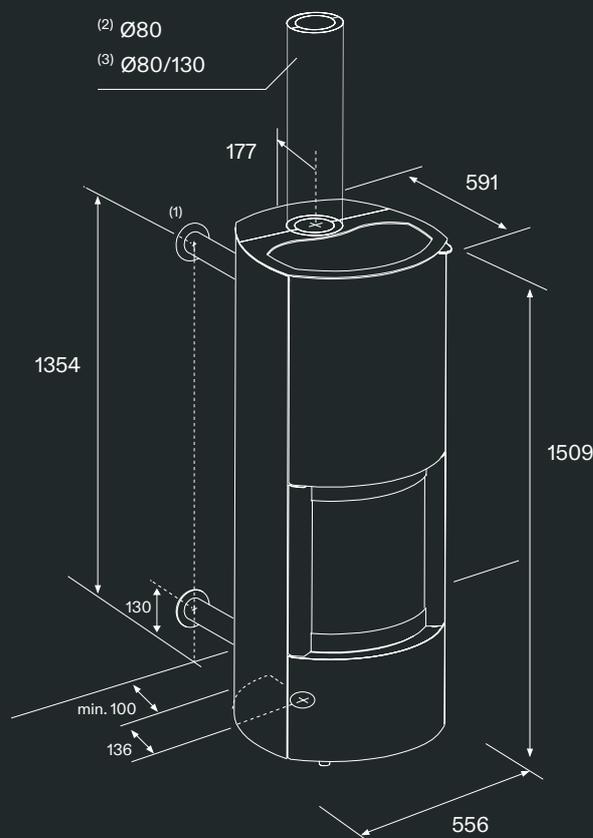

It can be kept directly on the device in a space provided for this purpose.

Specifications

Technical characteristics

COLOUR	STÜVBLACK
MASS	180 kg
NOMINAL HEATING POWER	8,1 kW
NOMINAL EFFICIENCY	90,3 %
SEASONAL EFFICIENCY	87 %
CO (LOW EMISSION TECH.)	4 mg/Nm ³
PARTICLES	6 mg/Nm ³
AVERAGE ELECTRICAL CONSUMPTION	25 W
ENERGY EFFICIENCY INDEX	128
ENERGY CLASS	A+
COMPLIANCE STANDARDS AND LABELS	ECODESIGN 2022
PELLET CONSUMPTION/HOUR	0,84 > 1,84 kg/h
Ø OUTSIDE AIR CONNECTION	60 mm
Ø SMOKE OUTLET	80/130 mm

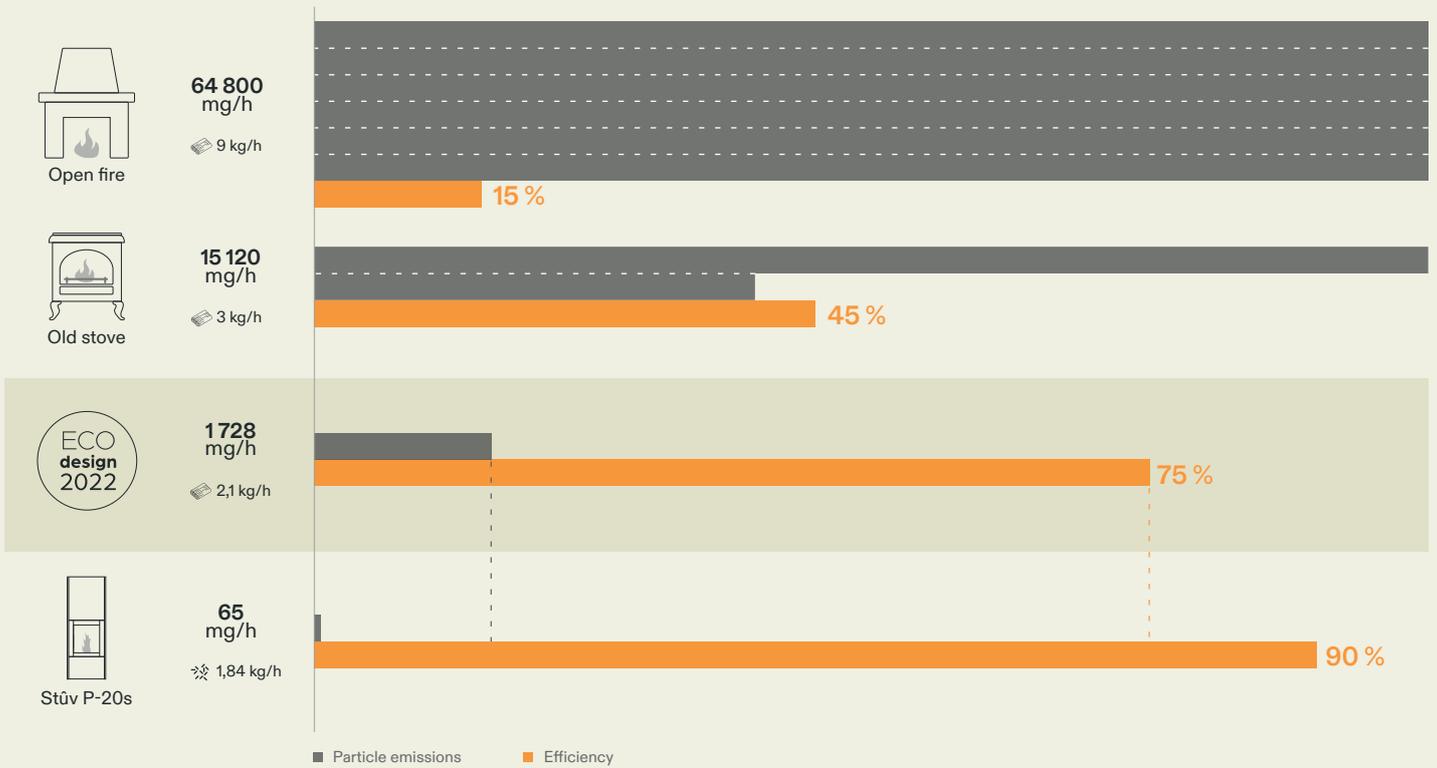

Dimensions

3 types of connections

- Rear outlet single wall ⁽¹⁾
- Top outlet single wall (as an option) ⁽²⁾
- Top outlet double wall or concentric (as an option) ⁽³⁾

High performance

With its high level of efficiency and incredibly low fine particle emissions, the Stův P-20s performs better than the Ecodesign 2022 standard.

The Stův P-20s pellet stove issues almost 1000 fewer fine particles than an open fire. The fine particle and CO emissions from the Stův P-20s are so low that official tests carried out by specialist independent laboratories barely detect them. With 90% efficiency!

- The stoves and their components are manufactured with the utmost care in Belgium, right in the heart of Europe.
A well-maintained Stûv fire is for life.
- Stûv offers users of its products an extended warranty:
in total 3 years on the body of the stove,
2 years on the electrical components,
3 years on the other components (see detailed conditions on stuv.com).
- To benefit from this extended warranty, complete the online form on stuv.com.
